Local phone:	(09) 444 1384

See the below options for removing activities from devices.

### Un-dispatch from selected devices

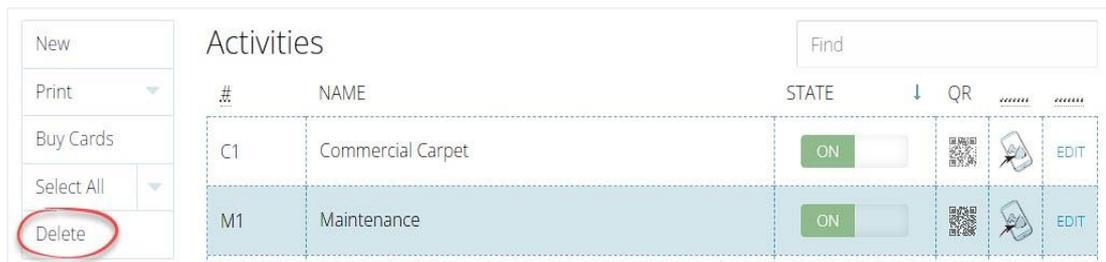

To remove activities from selected devices (instead of removing from all devices), un-dispatch the activity from the selected devices. See [Un-dispatching activities from a device](#) for more info.

### Remove from all devices

To remove an activity from all devices and prevent employees from logging any more time against it, navigate to the **Setup > Activities** screen within your web dashboard and perform either of the following actions:

a. **Delete activity**

Click to select each activity record you want to delete. Once selected, click the *Delete* button in the left-hand actions menu.

b. **Turn off activity**

Click on the *State* switch for the activity record to toggle the visibility on or off.

**Note:** If you find that activities are still showing on devices even after you've tried all above options, check that the device has an internet connection and has fully synced. If it has synced but is still showing the incorrect activities, try performing a [sync reset on the TimeDock hardware](#) or [sync reset on the mobile app](#).
